Agrupamento de Escolas Eduardo Gageiro

School	Escola Secundária de Sacavém
School Group	Agrupamento de Escolas Eduardo Gageiro
Address	Rua Sport Grupo Sacavenense, 2685-011 Sacavém, Loures, Portugal
Telephone / Website	+351 219 499 800 www.aeeg.pt
Director / School Official	Magda Almeida [HEAD TEACHER, directora@eduga.pt]

School and Community Context

Escola Secundária de Sacavém is the upper-secondary school and administrative seat of Agrupamento de Escolas Eduardo Gageiro (AEEG), a public school group located in Sacavém, in the municipality of Loures, within the Lisbon metropolitan area. The school group serves students from preschool through upper-secondary education and participates in Portugal's Priority Intervention Educational Territories (TEIP) programme. The AEEG Educational Project 2024-2027 describes a highly diverse school community, with approximately 40 nationalities represented.

Portuguese Upper-Secondary Education

Portuguese upper-secondary education normally comprises grades 10, 11 and 12. Students follow nationally regulated pathways. At Escola Secundária de Sacavém, upper-secondary provision includes Scientific-Humanistic Courses and Professional Courses. Both pathways lead to completion of Portuguese upper-secondary education. Professional Courses are three-year upper-secondary programmes that additionally lead to a Level 4 professional qualification under the Portuguese National Qualifications Framework and include substantial technical and work-based learning.

Upper-Secondary Programs Offered

Scientific-Humanistic Courses	Professional Courses
- Sciences and Technologies - Languages and Humanities - Socioeconomic Sciences	- Graphic Communication Design - Computer Systems Management and Programming (TGPSI) - Electrical Installations - Commercial Technician - Tourism Technician

Grading System and Academic Reporting

Academic performance in Portuguese upper-secondary education is reported on a national 0-20 scale. A grade of 10/20 is the minimum passing grade. The official academic record remains the numerical 0-20 grade.

Cumulative GPA: THE SCHOOL DOES NOT CALCULATE A U.S.-STYLE 4.0 GPA

Class rank: THE SCHOOL DOES NOT RANK STUDENTS

AP / Honors: THE SCHOOL DOES NOT USE U.S.-STYLE AP OR HONORS LABELS

International Baccalaureate: THE SCHOOL DOES NOT OFFER THE INTERNATIONAL BACCALAUREATE

SCIENTIFIC-HUMANISTIC EDUCATION AND GRADING

Context for U.S. college admission readers

Scientific-Humanistic Courses

Scientific-Humanistic Courses are three-year academic upper-secondary programmes designed primarily to prepare students for higher education. Students follow a nationally defined curriculum combining general education with course-specific subjects.

Final Grade in Each Subject (CFD)

For a one-year subject that is not subject to a national final examination in the student's curriculum, the final subject grade is the annual grade. For a multi-year subject that is not subject to a national final examination, the final subject grade is the simple average of the annual grades obtained in the years in which the subject was taught, rounded to a whole number.

Example - multi-year subject without a national final examination

Year 10: 15/20 | Year 11: 16/20 | Year 12: 17/20 -> $(15 + 16 + 17) / 3 = 16/20$ final subject grade.

When a national final examination is required for course completion in a subject under the applicable regulations, the final subject grade combines the Internal Final Grade (CIF) and the national examination grade (CE).

$$CFD = (7.5 \times CIF + 2.5 \times CE) / 10$$

Equivalent to 75% internal final grade + 25% national examination grade. The result is rounded to a whole number.

Example - subject with a national final examination

CIF 16/20 and examination 14/20 -> $(7.5 \times 16 + 2.5 \times 14) / 10 = 15.5$ -> 16/20 final subject grade.

Final Course Classification (CFC)

Under the rules fully applicable to grade 12 from the 2025-2026 school year onward, the final course classification is a weighted average of the final grades obtained in all subjects in the student's curriculum. Three-year subjects receive weight 3, two-year subjects receive weight 2, and one-year subjects receive weight 1.

$$CFC = [3 \times \text{SUM}(CFD \text{ 3-year}) + 2 \times \text{SUM}(CFD \text{ 2-year}) + \text{SUM}(CFD \text{ 1-year})] / [3n_3 + 2n_2 + n_1]$$

CFC = final course classification | CFD = final subject grade | $n_3/n_2/n_1$ = number of 3-year, 2-year and 1-year subjects.

The final course classification is rounded to a whole number on the 0-20 scale. Moral and Religious Education, when taken, is not included in this calculation.

Duration	Example grades	Weight	Contribution
3 years	15, 16, 17	x3	144
2 years	16, 15, 17, 14	x2	124
1 year	18, 16	x1	34

Illustrative result: $(144 + 124 + 34) / 19 = 15.89$ -> final course classification: 16/20.

PROFESSIONAL EDUCATION AND GRADING

Context for U.S. college admission readers

Professional Courses in Portugal

Professional Courses are three-year upper-secondary programmes leading to dual certification: completion of upper-secondary education and a Level 4 professional qualification under the Portuguese National Qualifications Framework. They combine sociocultural, scientific and technological education with Work-Based Training (Formacao em Contexto de Trabalho - FCT) and a final Professional Aptitude Project (Prova de Aptidão Profissional - PAP).

Students may progress to post-secondary or higher education after completing a Professional Course, subject to the applicable admission requirements of the receiving institution or national higher-education access system.

How Professional Course Grades Are Calculated

For sociocultural and scientific subjects, the final grade in each subject is the simple average of the grades obtained in its modules, rounded to a whole number. The final grade of the technological component is based on the applicable UFCD/STTU units (or modules where applicable). Students must obtain at least 10/20 in the required modules/UFCD and must also pass FCT and PAP with at least 10/20.

Sociocultural	Scientific	Technological	Work-Based	Professional Project
22%	22%	22%	11%	23%

$$CFC = 0.22 \times FSC + 0.22 \times FC + 0.22 \times FT + 0.11 \times FCT + 0.23 \times PAP$$

The final course classification is rounded to a whole number on the Portuguese 0-20 scale. Moral and Religious Education is not included in the final course classification.

TGPSI at Escola Secundária de Sacavém

The Professional Course in Computer Systems Management and Programming (Técnico/a de Gestão e Programação de Sistemas Informáticos - TGPSI) has a total scheduled workload of 3,200 hours in the AEEG 2024-2027 training plan.

Component	Hours	Selected Coursework / Structure
Sociocultural	1,000	Portuguese; Foreign Language; Integration Area; Physical Education; ICT
Scientific	500	Physics and Chemistry; Mathematics
Technological	1,100	Computer Architecture; Operating Systems; Communication Networks; Programming and Information Systems
FCT	600	Work-Based Training across the programme
PAP	Required	Final professional project developed, presented and defended before a jury

Academic Context for U.S. Admission Review

Applicants from Escola Secundária de Sacavém should be evaluated within the Portuguese national 0-20 grading system and within the curriculum available to them. Direct conversion of Portuguese grades to a U.S. 4.0 GPA is not recommended unless performed by the receiving institution or a credential evaluator.
